UX & Product Design with AI

Kirill Bush

Product design, User Research, UX Research | Fintech | Crypto |
DeFi | Web3 | 75k-95k\$ year
Phuket, Thailand

Summary

I am focused on designing UX for startups in fintech and crypto.
I create and refine prototypes and guidelines, develop new, and
improve the quality of existing interfaces. I create and ship products
focusing on user research and data-driven decisions.
I can lead the complete product design process and manage design
strategy.

I can work as a team or as a sole designer.

Experience

Beefy DAO

Senior Product Designer
February 2025 - Present (1 year 7 months)
Juggling pixels for 12,000 monthly users

Fadercraft

Founder
June 2026 - August 2026 (3 months)

Prom

Lead Product Designer
February 2024 - January 2025 (1 year)
Dubai, United Arab Emirates

Task: develop an ecosystem to launch a new blockchain.
Description of the process and gained experience:

Developed the MVP for the MIDL blockchain:

- Designed the product landing page – <https://midl-w.webflow.io/>
- Hired a Webflow developer, supervised the landing page development, refined the layout to perfection, and enriched it with animations, details, and proper responsiveness. This approach reduced development costs by 90% compared to using the company's in-house developers;
- Developed a recognizable blockchain logo;
- Created the product's visual style;
- Built a design system based on Park UI, with the correct use of tokens, variables, and consistent naming conventions, significantly speeding up development, enabling seamless updates to the brand's visual style, and minimizing developer errors.

Developed:

- A transaction scanner based on blockscout.com;
- A fork of app.uniswap.org;
- A fork of compound.finance;
- A fork of liquidity.io;
- A devnet portal;
- The product website, designed using a competitive SWOT analysis (right now contain a lot of frontend mistakes, realised as an MVP version);
- Optimized processes and established workflows for the SMM team, ensuring consistency in visual style, brand language, and smooth delivery of design solutions to the business.

FinchTrade

Founding Product Designer

August 2021 - May 2023 (1 year 10 months)

Zug, Switzerland

Designing of B2B liquidity provider & AML / KYT tool

Communications design creation

I started my work by:

Analysis of the product requirements list;

Compiling a list of user personas;

Competitors research(B2C2, Wintermute, Flowdesk, CoinAlpha).

Afterward, we conducted more than 20 JTBD interviews with users of these solutions, describing their needs and pains, transforming them into the list of future product requirements;

Expanding the list of product requirements and features for the MVP;
Formation of User Stories Map;
Information architecture creation, its validation & improvement;
UX and UI,

Conducting A/B tests for prototypes;
Quantitative research & qualitative surveys.

After the launch of MVP, I started to:

Increasing product metrics, working with user feedback and data analysis;
Generating hypotheses for new design iterations;
Documenting design system guidelines;
Developing brand communications and marketing materials;
Developing additional product features and solutions;
Conducting supervision;

Achievements:

- Created user cabinet & admin panel
 - Optimised company document workflow;
 - The onboarding time of new clients has been reduced by 79% compared to the first ver.
 - Finch design system created;
- Created product website – www.finchtrade.com;
 - Effectively communicates the brand's value proposition

(IA organized By the pains, tasks, and goals of the target audience);
– Attracts potential customers (bounce rate reduced from 68% to 14%

time on site≈ 00:03:40, page depth≈ 3:28, misclicks= 6%);

- In pair with the front-end developer, we optimized page loading speed up to 98%;
 - Created a design system, brand book, and brand identity;
 - Created SMM style guide, LinkedIn, and Medium feed;
 - Created POS materials and physical identity elements.
-
- Created an additional SaaS product for the company – www.marketguard.io;

- Created a user cabinet and admin panel with several types of roles;
- LinkedIn and Medium feed created;

Sollers-Auto

Founding Product Designer

July 2020 - June 2021 (1 year)

Moscow, Moscow City, Russia

Designing of a new B2B carsharing service

Tasks:

- Product design from scratch:
 - User research, user interviews, customer development;
 - Creation and testing of information architecture;
 - UX and UI design;
 - A/B testing, quantitative research;
 - Generating hypotheses and design solutions;
 - Formation and documentation of design systems;
- Creating white-label applications for B2C clients;
- Author supervision and quality control of frontend development.

Achievements:

- Created a multi-user portal;
- Created a visual brand language;
- Created a design system;
- Developed an admin panel

- Automated processes for servicing car parks and reduced their maintenance costs by 35%;

- Created a white-label application for the App Store and Google Play.

Mirafox
